

Frequently Asked Questions:

1. What are the specific benefits that Lil Max offers?

- Lil Max offers several unique features that separate MIFAB and Lil Max from the competition. Key among these benefits is the heavy duty ribbed body design. The Lil Max design is durable, rigid and able to withstand a likely impact when installed above ground in a commercial kitchen. The ribbed wall design provides extra structural integrity for in ground installations without fear of collapse.
- The Lil Max lid is gasketed to contain odors and removes easily for onsite maintenance and cleaning.
- The “External Vented Flow Control Fitting” is proven to result in more effective grease interception. As air enters the interceptor, grease coats the resulting air bubbles and increases the efficiency of the grease rising to the surface.
- Lil Max’s large size selection allows the unit to be sized to that closest operational need, limiting over sizing inefficiencies and over sending.
- Lil Max has approvals from the following organizations... ASME, PDI, UPC and CSA.
- Lil Max is born right here in the USA and meets the requirements of the Buy America Act.
- Lil Max has a modular design that will allow easy conversion to a solids or oil interceptor.
- Lil Max can be supplied with the required options and accessories needed with grease interceptors. For example, a high level alarm (HLA).
- Lil Max has an industry leading **limited lifetime warranty**. The current category leader only offers a 10 year warranty.

2. What is the minimum Wholesaler order from the local inventory?

The wholesaler can pick up one unit of any size from your inventory locally.

3. Why should a Wholesaler switch to Lil Max?

We’re competitive, we’re certified, we offer a full line of products (7 gpm – 100 gpm), we likely support their buying group, we offer 10 day service to the job site and we now offer a low minimum order.

4. What are the code requirements for Plastic Grease Interceptors?

Code requirements will vary from area to area. Lil Max has your code requirements covered with PDI, ASME, CPC and CSA approvals.

5. Who is the competition and how do we compare?

The leading competitor in this category of plastic grease interceptors is Canplas. Canplas is a Canadian company who also manufactures PVC fittings. Lil Max compares positively to the competition, having a strong reinforced body and easy open lid. Larger finger holes are provided to make lid removal quick. An external vented flow control fitting is provided. Additionally, we are priced very competitively and MIFAB will meet the competitors pricing when required.

6. Can Lil Max be linked together for heavier flows rates?

Yes. Lil Max can easily be daisy chained together to meet large demands, flow requirements, or system configurations.

7. Some area codes require a flow viewing portal, does Lil Max have one?

Flow would be normally determined by removing the lid and monitoring the flow visibly. A separate viewing port and / or sampling port could be provided by linking a smaller (MI-G-1-PL) downstream.

8. Is there an advantage to having an internal vs external flow control?

We believe the External Flow Control is the better choice. The external flow control is easier to access and easier to maintain. There are several studies showing the benefits of an external flow control. External flow controls allows more air to blend with the grease resulting in better separation of grease and water.

Because it's external, it can also be located anywhere on the inward flow piping assembly, even indoors and out in the weather. An external flow control offers installation choices not found with the internal flow control.

9. What is the ship time out of the factory?

We have sitting inventory and can ship direct from the manufacturer's facility located in Indiana in five days, allowing for Lil Max to be at any job site in ten (10) days.

10. Will we have localized inventory?

Lil Max will be positioned as localized inventory for customer pick up from your local MIFAB Rep's warehouse for same day service.

11. What is required to install a Lil Max unit?

Any qualified plumber can install a Lil Max unit. Typical installation is a screwdriver and 4 couplings (interceptor and flow control).

12. Is a limited lifetime warranty necessary?

The industry leading competitor only offers a 10 year warranty. We wanted to give you every available tool to make you successful, so we beat the competition's warranty with our Limited Lifetime Warranty.

13. Who should I contact with questions?

Your Regional Manager should be your first point of contact. Mike Quirino, MIFAB'S Technical Service Engineer can be reached at (773) 341-3004 or Mquirino@mifab.com and will be available to handle any design or technical questions.
