
XL-MI-G-PL-750 (75 GPM) and XL-MI-G-PL-1150 (100 GPM) Features & Benefits:

1. **Buying Groups** - Schier is not in any of the buying groups. MIFAB is in WIT, AD, and OMNI. (Please make sure to target wholesale target customers in these specific groups.)
2. **"C" Dimension** - The standard "C" dimension on both MIFAB models is 24 ½" and can be field adjusted by the contractor down to 15 ½" on the XL-MI-G-PL-750 and to 16" on the XL-MI-G-PL-1150. The standard "C" dimension from Schier is only 12 ½" on their GB-75 and is only 13 ½" on their GB-250. This means that contractors will not have to buy extensions as often with MIFAB's interceptors – a savings of around 10%.
3. **Extensions** - Schier's extensions are only available from Schier – resulting in delays and time for production and shipment to the customer from Schier. MIFAB's patent pending extension system consists solely of one piece of 18" diameter ADS pipe (to whatever "C" dimension the contractor needs). This gives the contractor the option to purchase an extension from MIFAB or to buy a length of ADS pipe from their local waterworks wholesaler in order to complete the installation immediately. This also means that the cost of the MIFAB extension (when ordered from a local waterworks wholesaler will be significantly less expensive than buying the same height extension system from Schier. Schier's SR-24 (Short Riser – 6" – 24" sells for \$528.00 List Price and their LR-24 (Long Riser – 24" – 39") sells for \$664.00 List Price.
4. **Cover** - H-20 load rated covers. MIFAB's XL-MI-G-PL-750 and XL-MI-G-PL-1150 interceptors are shipped standard with steel encased, 24" diameter, composite covers that have a standard 20,000 lbs. (H-20) load rating. Schier's standard covers only have a load rating of 16,000 Lbs. and charge \$442.00 List Price extra for their H-20 load rated cover.
5. **Approvals** – MIFAB's XL-MI-G-PL-750 and XL-MI-G-PL-1150 grease interceptors are PDI G-101, ASME A112.14.3 and CSA B481 approved and in process to be IAPMO listed. Schier's GB-75 and GB-250 grease interceptors do not have PDI approval.
6. **Easy to Use** - MIFAB's XL-MI-G-PL-750 and XL-MI-G-PL-1150 grease interceptors are only 33 ½" wide so that they can fit through doorways and narrow hallways. Two people can carry and install the interceptors. There is no need for a crane for their installation.
7. **Grease Holding Capacity** – MIFAB's XL-MI-G-PL-750 has a flow rate of 75 GPM and a grease holding capacity of 750 lbs. and the XL-MI-G-PL-1150 grease interceptor has a flow rate of 100 GPM and a grease holding capacity of 1,150 lbs. These holding capacities are greater than Schier's 616 lbs. for their GB-75 and 1,076 lbs. for their GB-250.
