LIL MAX – HDPE PLASTER INTERCEPTOR

Specification: MIFAB® MI-PLASTER-PL HDPE injection molded plaster interceptor with internal perforated sediment bucket with coarse screen, baffle assembly and HDPE injection molded, non skid, rectangular gasketed lid with securing latches.

Function: Typically installed between the grease interceptor and the fixtures served either on or recessed in the floor. The solids interceptor will filter out solids and sediment from the fixture waste line before entering the related grease interceptor to reduce clogging and improve performance. Interceptor is cleaned by removing top access gasketed lid and accessing the internal sediment bucket. Simple latch design permits fast and easy removal of the lid for cleaning and maintenance. HDPE injection molded body and lid are covered by a limited lifetime warranty.
