## SEWAGE AIR RELEASE VALVES

**Specification:** The AV-WP-KA valve has been designed for efficient discharge and intake of air from pressurized sewage systems where confined air (gases) could impair the system's operation.

**Function:** Introduces large quantities of air into the system when the pipe drains, maintaining atmospheric pressures in the pipeline and preventing collapse and cavitation damage to the conduits. The AV-WP-KA relieves entrapped air (gases) from the pipeline while the network is at normal working pressure.
