**Big Max® – HDPE Rice Interceptors**

**Specification:** MIFAB® Series BIG- \_\_\_\_ -R HDPE rotational molded rice interceptor with liquid holding capacity of \_\_\_\_ (indicate) gallons. Unit shall include: dual strainer baffles with 3/8" Dia. holes, 1/2" apart, deep seal trap covered by lid, adjustable lid system, sample port access and 4" no hub inlet and outlet connections. Composite lids provides a water / gas tight seal & has a minimum of 20,000 lbs. load capacity. The lid is designed in accordance with the loading requirements of AASHTO H20.

**Function:** Used in food processing plants and restaurant facilities that have a lot of rice to receive waste water. The rice interceptor will filter out rice from the fixture waste line before entering the pipe system to reduce clogging and improve performance. Typically installed either on or into the floor. Narrow width permits access through doorways and down stairwells. High Density Polyethylene construction ensures a lightweight installation process (two people can move and install it). Regular maintenance is required to keep the interceptor functioning. All Big Max interceptors can withstand a maximum operating temperature: 150° F continuous.
