MCL-G-BO

BOLT ON (FIXED) EXTENSIONS FOR MCL-G SERIES OF GREASE INTERCEPTORS

Specification: MIFAB MCL-G-BO Series (specify Model #) of fixed bolt on extensions are manufactured from 14 gauge powder epoxy coated steel and are complete with lid sealing neoprene gasket and lockdown hardware.

Function: Ideal for installations where the height of the interceptor needs to be increased to meet the finished floor while leaving the inlet and outlet locations the same. The original lid of the interceptor is removed and the bolt on extension is placed on top of the lid sealing gasket. The original interceptor lid is then placed on top of the bolt on extension (lid sealing gasket is provided for the top of the bolt on extension). The extra long lockdown hardware provided with the bolt on extension is used to secure the lid to the cross bar supports.

Note: Shipped with sealing gasket and lockdown hardware.

MODEL NO.	USE WITH	US GPM	"A" LENGTH	"B" WIDTH	"E" HEIGHT	NO. OF BOLTS
MCL-G-BO-4-6	MCL-G-4	20	23.75"	15.75"	6"	1
