MI-G-BO

BOLT ON (FIXED) EXTENSIONS FOR MI-G GREASE INTERCEPTORS

Specification: MIFAB® MI-G-BO Series (specify Model #) of fixed bolt on extensions are manufactured from 10 gauge, acid resistant, powder epoxy coated steel and are complete with lid sealing urethane gasket and lockdown hardware.

Function: Ideal for installations where the height of the interceptor needs to be increased to meet the finished floor while leaving the inlet and outlet locations the same. The original lid of the interceptor is removed and the bolt on extension is placed on top of the lid sealing gasket. The original interceptor lid is then placed on top of the bolt on extension (lid sealing gasket is provided for the top of the bolt on extension). The extra long lockdown hardware provided with the bolt on extension is used to secure the lid to the cross bar supports.
